

Product Development Services

Our Services

One of e-Zee's main services to the Industry is to provide Productwriter Developers to assist Insurer's, MGA's and Brokers with the building and testing of Polaris products using the Productwriter toolset.

Most of the major Software Houses and a large number of proprietary Broker systems now run the Polaris Run Time Environment rating engine and given the dynamic nature of the market, companies in-house resources are often insufficient to cope with the demands placed upon them.

e-Zee can provide experienced product builders who can start adding value immediately given their pedigrees.

Personnel

Our experienced and highly skilled team has worked for all the major composites and some of the largest intermediaries.

The team has over 55 years of product building experience and have all worked in underwriting areas or as programmers for broker software houses.

The team is located in different parts of the UK and can work on site, or remotely, to suit in different client's requirements. With staff in Manchester, the South coast, South East and the Midlands we can align resources to clients location as appropriate.

All our team are featured on our website and we can provide testimonials and CV's upon request.

Product Expertise

Working for some many Insurers over a long period of time and with a variety of different backgrounds the team have a wealth of experience across both Personal and Commercial Lines and have written complex products including Mini-Fleet, Commercial Combined and multi-peril Household products.

As well as building the premium calculation algorithms we can also build forms and documents and specify EDI population output if required.

In addition to the build services we can also provide mentoring to more junior staff to enable Insurers to build up their skill base of in-house expertise, thereby reducing the reliance upon contractors in future. Testing of products is usually included in our contracts and is undertaken by our experienced testing consultants. We can even undertake testing in isolation for products built internally or by another party. For more information please see our Testing Services factsheet.

Commercial Engagement

When approached by new clients we will meet your team to gain a working understanding of what is required, followed by a more detailed review of product specifications and other associated documents. We can then agree how best to progress. This can be based upon a fixed number of man days, or fixed price contract, to complete a particular piece of work. Where a longer term and more flexible arrangement is required we can provide clients with a bank of days which can be used on a flexible basis over a fixed period. This approach can be more cost effective and gives the client greater control over how resource is used. This block approach is typically used where a number of developments are required in a short period or for longer term maintenance contracts.

Proposals and Pricing

Before being appointed e-Zee will provide you with a formal proposal featuring the scope of works, consultancy rates and the expenses. This will need to be signed by both parties before e-Zee commence any work. The extent of the proposal will be determined by the amount and quality of preparation you have undertaken to date.

Speak to e-Zee

Should you wish to discuss with us ways we may be able to help your organisation we have four directors spread across the UK so we can arrange an initial visit to your offices at no cost to progress talks. Please feel free to contact us.
