

Our Credentials

e-Zee can provide you with experienced business analysts. e-Zee operatives have many years' experience being employed by, or providing services to, all the major software suppliers including Acturis, CDL, Open-GI, SSP and TGSL. This means they have a proven record in software development with end-to-end experience of the project life-cycle. They also have proven experience in interacting directly with end-users and are results orientated with good communication and interpersonal skills.

Step 1 - Fact Finding

The first step is to establish the areas where you are having difficulty in delivering services or solutions. Speak to the appropriate areas of your business to ascertain where their particular blockers are and determine whether additional dedicated e-Zee resource could provide the impetus you need.

Step 2 – Prioritise

Look at the deliverables and establish the priority order. The UK Insurance market is a dynamic environment and there is always pressure to have a product or service operational or available within a very tight deadline. This will determine where additional e-Zee resource can have the biggest impact.

Step 3 – Speak to e-Zee

With all this information to hand you are now in a position to approach e-Zee and under the umbrella of a non-disclosure agreement (NDA) engage in informal discussions about where e-Zee can provide the most appropriate personnel to engage with your resources.

Step 4 – Cost Benefit Analysis

With a clear view of blockers and priorities and the informal financial input from e-Zee you are in a much better position to produce a cost benefit analysis that, with e-Zee as your ally, should be well received by your board.

Step 5 – Proposals and Pricing

Should you wish to proceed, e-Zee will provide you with a formal proposal featuring the scope of works, consultancy rates and the expenses. This will need to be signed by both parties before e-Zee commence any work. The extent of the proposal will be determined by the amount and quality of preparation you have undertaken to date.

Additional Services

It might be worth noting that e-Zee is experienced in all aspects of system implementation, from data mapping and migration to system configuration. Our Project & Implementation Management factsheet may be useful. If you are having bespoke products created for delegated authority products and require assistance with either creating or testing these products (for your back-office or web solutions), please also have a look at our Product Building Services and Testing Services factsheets.
